Product Enhancement Voting Now Available for Clients in EOS.Web Online Help

New voting capability improves client input into product enhancements and features

(Carlsbad, CA – November 2, 2011) EOS International announced today that a new enhancement and feature selection process that incorporates user voting per client site is now available from the main EOS.Web Online Help screen. This client voting capability will ensure that the most popular enhancement ideas receive the highest development priority.

Each EOS client site may rate each potential enhancement. After casting their initial votes, clients may adjust their rating online as desired. Every three weeks, at the start of each development sprint, EOS developers are assigned enhancements from the list to include in the product.

Enhancement suggestions are available today for your library to rate. “EOS is dedicated to ensuring that our clients consistently receive new improvements to their products,” said Jeff Goodwin, Vice President of Product Development, EOS International. “Our clients can now vote on which enhancements best suit their needs.”
